

Give every video a useful next step

01 / Define one useful outcome

Write one sentence describing what the viewer can do after the lesson. Choose a real task and keep the promise specific.

02 / Make the video easy to reach

Embed the YouTube video and include a direct YouTube link as a fallback. Check the published experience on desktop and mobile before sharing.

03 / Put the instructions underneath

Turn the demonstrated workflow into short, ordered steps. Explain what to enter, what result to expect and what the viewer should review.

04 / Add useful chapters

Link each chapter to its matching YouTube timestamp. Name chapters by the task, then check that each link opens at the right moment.

05 / Explain the download clearly

Tell viewers what the guide contains. Show the name and email fields with clear newsletter consent. Test delivery before promising that the download works.

06 / Keep tools and next steps current

Link to the tools actually used. Keep affiliate disclosures clear and destinations accurate. Offer a relevant lesson, training option or conversation next.

Review before you share

A practical five-minute review

Open the lesson as a viewer. Check the video, direct link, steps, chapters, tool destinations and guide delivery. Review mobile readability and any claims that depend on current prices or features.

Plan your lesson

My viewer wants to: _____

The result I will demonstrate: _____

The step most likely to need explanation: _____

My next review date: _____

Resources from this lesson

Use the live directory for current tool links. The example page demonstrates the structure; this checklist does not certify its playback or download delivery.
